

Guess the Footprints

Lots of animals in the UK are very shy and very wary of humans. Their senses are really strong and as soon as they hear, see, smell, feel or taste humans coming they will disappear very quickly into the distance. Lots of animals also come out at night when many humans will be in bed. By looking at the footprints they have left behind, we can tell what creatures have been visiting, their size, and sometimes how many animals have been around.

Can you match up the animal names with their footprints and picture? The first one has been done for you.

Badger

Deer

Owl

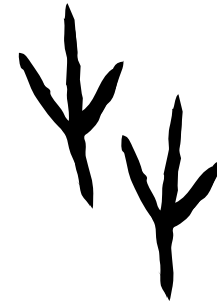

Human

Fox

Wood Mouse

Swan

Frog

Blackbird

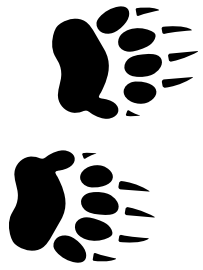

Did you know that all of these animals can be found in Milton Keynes?

Top tip:

Don't forget to look out for footprints on your next walk in the park! You will usually find them in mud or sandy soil.
